

Automatic Packet Creation and Duplicate Detection

PACKETExpert is the industry's premier tool for automatic packet creation and accurate duplicate detection of documents within.

Stop wasting resources on packet generation...

- PACKETExpert applies page tags to incoming documents, UI tagging is available
- Automatically applies client-directed include/exclude rules to assemble packets, which are sorted in a pre-determined order based on client specifications and needs
- Our proprietary algorithms identify potential duplicate documents and eliminate those falling within specified thresholds. Removal capabilities between 80-99.9% confidence
- Option for additional manual validation and review before final delivery
- Ledger narrative built with key word search. Results linked to specific text references in the final packet

Additional Features and Services...

Document ingestion, page keying and tagging services for easy word or phrase searches

Ability to manually preview duplicates before making final include/exclude decisions

Our interface is easily configurable within existing systems

Comprehensive dashboard reporting and custom report generation available

Available as a premium offering from Acrometis, PACKETExpert can be incorporated into CLAIMExpert or deployed as a standalone product solution.

**Packet generation is a time consuming and costly endeavor-
*Stop incurring unnecessary charges for duplicates and
automate your packet creation process today!***
