

Consolidate Your Bill Review, PPO Processing and State Specific Negotiations

In addition to efficient claims processing capabilities, we offer unrivaled bill review and re-pricing solutions to our clients. Our

premium network Managed Care Gateway follows the same streamlined path as our claims processing platforms to reduce inconsistencies and errors. As the connection between claims operations and best-in-class providers, MCG removes manual review when determining a bill's legitimacy, relatedness and ultimate compensability. Bill review is available as a single platform, and can be coupled with optional features.

Bill Review Services

Put an end to manual sorting and multiple systems with our bill review services.

Vastly reduce bill review charges and ensure all charges are valid while meeting jurisdictionally required timeframes. The system automatically evaluates bills on a line level based on the injury, associated body parts and provider billing for the claimant, then reduces provider charges to fee schedule or UCR. If necessary we perform manual audits on bills that require further review before validation. Time stamped decisions and actions are taken on bills for audit purposes.

PPO/ Partner Re-Pricing

An additional re-pricing negotiation service to save on medical expenses that are outside of the savings options your current bill review solution provides. Agreements with industry-leading PPO partners allow us to deliver the best rates for our clients. This is a feature on top of bill review and Acrometis receives your claim feed and converts images and sends repriced data back to your systems.

State Negotiations

Acrometis manages state-specific workflows centered around pre-authorization, payment negotiations and payment monitoring. Another add-on feature, Acrometis works directly with providers to obtain signed provider agreements while securing the most advantageous rates.

Our expertise is unparalleled when it comes to determining compensability. Stop paying more than you should in medical costs.
